WaseetAI Platform

Developer Integration Guide & API Reference

Target System:	Waseet Freelance Marketplace (dev.waseetai.com)
Cloud Service:	Google Cloud Run (Fully Managed Container)
Live Endpoint:	`https://waseet-ai-api-1041761245251.us-central1.run.app`
Web Console:	`https://waaseet-ai.web.app`
Authentication:	`Bearer Token (waseet_secret_dev_key_2026)`
AI Engine:	Waseet Neural LLM & Neural Voice Engine
Version / Date:	v1.2.0 - September 2026

دليل التكامل الهندسي لمبرمج منصة وسيط

RESTful و SSE و Socket.IO، بالإضافة إلى ميزة التحدث ونطق اللهجات العربية بصوت حقيقي فائق الجودة بتقنية Waseet Neural Voice المتطورة.
واستدعاء خدمات الذكاء الاصطناعي السحابية. السيرفر مستضاف بالكامل على Google Cloud Run ويعمل كـ Microservice مستقلة تدعم بروتوكولات
هذا الدليل مخصص لمبرمجي ومطوري منصة وسيط للعمل الحر (dev.waseetai.com) لربط

1. Global Endpoints & Authentication

All requests must include the Bearer authentication token in the HTTP Authorization header. Cross-Origin Resource Sharing (CORS) is enabled globally with wildcard origin (*), allowing seamless invocation from browsers, mobile apps, or backend servers.

Header	Value
`Authorization`	`Bearer waseet_secret_dev_key_2026`
`Content-Type`	`application/json`

2. Complete Endpoints Summary Table

Method & Endpoint	Category	Description
`GET /health`	System	Health check & uptime status
`POST /v1/ai/project-description/stream`	Projects	Live SSE project scope & description
`POST /v1/ai/milestones`	Projects	100% financial escrow milestones
`POST /v1/ai/projects/feasibility`	Projects	Feasibility audit & risk scoring
`POST /v1/ai/projects/draft`	Projects	Draft proposal for non-tech clients
`POST /v1/ai/assessments/generate`	Exams	Generate specialty MCQ exam questions
`POST /v1/ai/assessments/evaluate`	Exams	Deterministic scoring & pass/fail
`POST /v1/ai/proposals/enrich`	Proposals	Proposal audit & win-rate boost (§12)
`POST /v1/ai/proposals/suggest`	Proposals	Proposal drafting & price guidance
`POST /v1/ai/marketplace/matching`	Marketplace	Project-freelancer AI matchmaking
`POST /v1/ai/providers/profile-metrics`	Providers	8 performance badges calculation
`POST /v1/ai/disputes/summary`	Disputes	Impartial dispute analysis
`POST /v1/ai/help/chat`	Support	RAG customer support stream with fallback
`POST /v1/ai/avatar/chat`	Avatar	Avatar text + synthesized WAV speech
`POST /v1/ai/tts/synthesize`	Speech	Waseet Neural Voice with dialects
`GET /v1/ai/tts/speak`	Speech	Direct binary audio stream (HTML5 audio)
`POST /v1/ai/tts/stream`	Speech	Real-time SSE audio chunk streaming
`GET /v1/ai/tts/catalog`	Speech	List of voices, models, and dialects

3. Waseet Neural Voice Generation (TTS) & Dialects

The WaseetAI service integrates high-definition neural speech synthesis (Waseet Voice Lite, Waseet Voice Turbo, and Waseet Voice Pro) with multi-engine failover across the cloud cluster to guarantee ultra-low latency, natural prosody, and zero downtime.

Endpoint: POST /v1/ai/tts/synthesize

```
{
  "text": "يا أهلاً بيك يا فندم في منصة وسيط! إحنا هنا علشان نضمنلك كل مليم في مشروعك.",
  "model": "AUTO",                      // AUTO | waseet-voice-lite | waseet-voice-turbo | wase
et-voice-pro
  "voice": "Puck",                      // Puck | Kore | Fenrir | Aoede | Zephyr | Sulafat | Ch
aron
  "dialect": "egyptian",                // egyptian | gulf | saudi | msa | english
  "speakingRate": "normal",             // normal | slow | rapid
  "mimeType": "audio/wav"               // audio/wav | audio/l16 | audio/mulaw
}
```

Direct Audio Playback via HTML5 Audio:

Frontend applications can directly embed audio using standard HTML5 tags without handling base64 decoding manually:

```
<audio src="https://waseet-ai-api-1041761245251.us-central1.run.app/v1/ai/tts/speak?text=مرحبا
+بكم&dialect;=egyptian&voice;=Puck" controls autoplay></audio>
```

Supported Dialects & Voice Personas:

Dialect / Accent	Prompt Adaptation	Recommended Voice
Egyptian (لهجة مصرية)	Warm, lively, expressive, friendly	`Puck (Male) or Kore (Female)`
Gulf (لهجة خليجية)	Hospitable, polite, calm, dignified	`Puck / Aoede`
Saudi (لهجة سعودية)	Welcoming, confident, articulate	`Puck / Kore`
MSA (فصحى معاصرة)	Clear, eloquent, authoritative	`Charon / Kore`
English	Professional, clear and engaging	`Zephyr / Puck`

4. Frontend Integration Examples (TypeScript / JavaScript)

The following snippet shows how dev.waseetai.com can consume both text generation and voice synthesis directly:

```
// 1. Text-To-Speech Synthesis
async function speakText(message, dialect = "egyptian") {
  const res = await fetch("https://waseet-ai-api-1041761245251.us-central1.run.app/v1/ai/tts/synthesize", {
    method: "POST",
    headers: {
      "Content-Type": "application/json",
      "Authorization": "Bearer waseet_secret_dev_key_2026"
    },
    body: JSON.stringify({
      text: message,
      model: "AUTO",
      voice: "Puck",
      dialect: dialect
    })
  });
  const json = await res.json();
  const audio = new Audio("data:audio/wav;base64," + json.data.audio.base64Audio);
  audio.play();
}

// 2. Server-Sent Events (SSE) Live Description Streaming
async function streamProjectDescription(title, category, onChunk) {
  const res = await fetch("https://waseet-ai-api-1041761245251.us-central1.run.app/v1/ai/project-description/stream", {
    method: "POST",
    headers: {
      "Content-Type": "application/json",
      "Authorization": "Bearer waseet_secret_dev_key_2026"
    },
    body: JSON.stringify({ title, category })
  });
  const reader = res.body.getReader();
  const decoder = new TextDecoder();
  while (true) {
    const { done, value } = await reader.read();
    if (done) break;
    const text = decoder.decode(value);
    for (const line of text.split("\n")) {
      if (line.startsWith("data: ")) {
        const data = JSON.parse(line.slice(6));
        if (data.chunk) onChunk(data.chunk);
      }
    }
  }
}
```

5. High-Availability Multi-Cluster Architecture & Resilience

The backend microservice encapsulates an automated high-availability multi-cluster architecture. It executes intelligent load balancing, proactive rate tracking, distributed connection pooling, and automatic failover whenever transient loads are encountered, guaranteeing virtually uninterrupted 99.9% uptime without manual intervention.
