Bulk Business Model AI Re-Audit

Description: Runs AI evaluation again for multiple business models that require review. The operation processes eligible business models in bulk and returns the result of the re-audit operation.

Endpoint

POST /api/business-models/re-audit-all

Request

No request body is required.

```
{}
```

Response

```
{
  "success": true,
  "data": {
    "processed": 0,
    "results": [
      {
        "id": "business-model-uuid",
        "status": "PUBLISHED"
      }
    ]
  }
}
```

Error Response

```
{
  "success": false,
  "message": "Unable to re-audit business models."
}
```

Business Model AI Audit

Description: Analyzes a provider business model using AI and produces an evaluation that can be used to review the quality and completeness of the submitted model.

Operation

The AI audit is executed as part of the business-model review flow and is also used by the bulk re-audit operation.

Input

The AI evaluation uses business-model information such as:

```
{
  "title": "Digital Marketing Consulting",
  "description": "Marketing consulting service for startups",
  "category": "Marketing",
  "pricing": {
    "amount": 3000
  }
}
```

AI Audit Result

```
{
  "isApproved": true,
  "score": 85,
  "summary": "...",
  "strengths": [
    "..."
  ],
  "issues": [
    "..."
  ],
  "recommendations": [
    "..."
  ]
}
```

Provider Delivery AI Review

Description: Allows a provider-side project delivery to be reviewed by AI. The review summarizes the submitted work and highlights aligned points, possible gaps and useful review questions.

Endpoint

POST /api/provider/projects/:id/stages/:stageId/ai-review

Request

The project and stage are identified using URL parameters.

```
{}
```

Response

```
{
  "success": true,
  "data": {
    "summary": "...",
    "alignedPoints": [
      "..."
    ],
    "potentialGaps": [
      "..."
    ],
    "questionsForReviewer": [
      "..."
    ]
  }
}
```

Error Response

```
{
  "success": false,
  "message": "Unable to generate delivery review."
}
```

AI Avatar Assistant

Description: Provides a conversational AI avatar capable of receiving a text message, generating an AI response and returning synthesized speech audio for the generated answer.

Socket Namespace

/

Client to Server Event

ai_chat

Request

```
{
  "message": "Can you help me improve my project proposal?"
}
```

Server to Client Event

ai_chat_response

Response

```
{
  "text": "AI generated response...",
  "audio": "base64-audio-data"
}
```

Error Response

If the AI request cannot be completed, the socket returns an error response instead of a successful assistant answer.

```
{
  "error": "Unable to process the AI assistant request."
}
```

Assessment Status

Description: Returns the current state of an AI-generated provider specialty assessment attempt.

Endpoint

GET /api/assessments/:attemptId/status

Request

No request body is required.

The assessment attempt is identified using:

```
{
  "attemptId": "attempt-uuid"
}
```

Response

```
{
  "success": true,
  "data": {
    "attemptId": "attempt-uuid",
    "status": "IN_PROGRESS",
    "score": null,
    "isPassed": null
  }
}
```

Assessment Real-Time Question Streaming

Description: Streams generated assessment questions to the provider while the AI assessment is being prepared.

Socket Namespace

/

Start Event

start_assessment

Request

```
{
  "providerSpecialtyId": "specialty-uuid"
}
```

Question Stream Event

question_streamed

Response

```
{
  "attemptId": "attempt-uuid",
  "question": {
    "id": 1,
    "textAr": "...",
    "options": [
      {
        "id": "a",
        "text": "..."
      },
      {
        "id": "b",
        "text": "..."
      }
    ]
  }
}
```

Assessment Ready Event

assessment_ready

```
{
  "attemptId": "attempt-uuid",
  "totalQuestions": 20,
  "timeLimitMinutes": 15,
  "generationSource": "GEMINI"
}
```

Error Event

assessment_error

```
{
  "code": "GENERATION_IN_PROGRESS",
  "message": "Assessment generation is already in progress."
}
```

Assessment Real-Time Evaluation

Description: Submits provider assessment answers through the real-time socket connection and returns the final AI-assisted assessment evaluation.

Socket Namespace

/

Submit Event

submit_answer

Request

```
{
  "attemptId": "attempt-uuid",
  "submittedAnswers": {
    "1": "b",
    "2": "a"
  }
}
```

Result Event

evaluation_complete

Response

```
{
  "attemptId": "attempt-uuid",
  "score": 85,
  "isPassed": true,
  "status": "COMPLETED",
  "feedbackAr": "...",
  "strengths": [
    "..."
  ],
  "weaknesses": [
```

```
    "..."
  ],
  "completedAt": "2026-09-27T10:00:00.000Z"
}
```

Error Event

assessment_error

```
{
  "code": "ALREADY_FINALIZED",
  "message": "Assessment already finalized."
}
```

Other possible error codes include:

- AUTH_REQUIRED
- INVALID_REQUEST
- RATE_LIMITED
- NOT_FOUND
- ALREADY_FINALIZED
- SUBMISSION_FAILED

Proposal AI Audit Progress

Description: Provides real-time progress updates while the AI proposal audit is being generated.

Socket Namespace

/

Start Event

trigger_ai_audit

Request

```
{
  "providerId": "provider-uuid",
  "projectId": "project-uuid"
}
```

Progress Event

ai_audit_progress

Response

```
{
  "event": "ai_audit_progress",
  "progress": 50,
  "message": "Analyzing proposal compatibility..."
}
```

Final Result Event

ai_audit_result

```
{
  "event": "ai_audit_result",
  "profileAudit": [
    "..."
  ],
  "triPartyComparison": "...",
  "finalMetrics": {
    "compatibilityScore": 80
  },
  "acceptanceOdds": 65
}
```

AI Text Suggestion Stream

Description: Streams AI-generated text suggestions to provider forms while the provider is preparing project or proposal content.

Socket Namespace

/

Client to Server Event

stream_ai_suggest_text

Request

```
{
  "title": "API Development"
}
```

Response

The generated text is returned incrementally as streamed text chunks through the active Socket.IO connection.

AI Description Enhancement Stream

Description: Improves an existing provider description using AI and streams the enhanced text back to the user in real time.

Socket Namespace

/

Client to Server Event

stream_ai_enhance_description

Request

```
{
  "description": "Existing description text..."
}
```

Response

The enhanced description is returned incrementally through streamed socket events until generation is complete.
